

In-App Purchase Product Creation

There are three major steps to deploying purchasable content. The first step will be to register and upload the content to the eCP content server. The next 2 steps involve creating the in-app purchase product item in each of the stores: Google and Apple.

Step 1 Content Server

Register and upload the purchasable content bundle to the ECP Server. The Product IDs for Google and Apple are how each store will indicate which product was purchased. Make sure that the IDs chosen here are exactly the same in the respective store.

Contents -> Add New Content

A screenshot of the 'Add New Content' form in the eCP application. The form is titled 'Add New Content' and is located within a breadcrumb trail: 'Home > Manage Content Listing > Add New Content'. The form contains several input fields: 'Content Title' with a placeholder 'Enter content title', 'iTunes Store Product Id' with a placeholder 'Enter iTunes Store Product Id', 'Google Play Product Id' with a placeholder 'Enter google store product id', and 'Content File Attachment' with a 'Select file' button. There is also a checkbox for 'Is Active'. At the bottom of the form are 'Save' and 'Cancel' buttons.

Step 2 App Store

Sign into iTunes Connect. Navigate to "In-App Purchases":

My Apps -> electric Common Prayer -> In-App Purchases -> Create New
Choose "Non-Consumable" product.

Choose a reference name. The “Reference Name” will be used by Apple to report on the application name. Use the “Product ID” created in step one.

The language section is critically important. The display name and description will be presented to the user. The language will be used to determine who receive which presentation. For example, user with there iPhone set to Spanish will receive the display name and description created for Spanish. English is the default language name and description.

The screenshot shows a dialog box titled "Add Language". It contains three input fields: "Language" (with "English" selected and a dropdown arrow), "Display Name" (an empty text field), and "Description" (an empty text area). Each field has a help icon (a question mark in a circle) to its right. At the bottom right of the dialog are "Cancel" and "Save" buttons.

Add a screenshot and submit for review.

Step 3 Play Store

Sign in to the Play store Developer Console. Select “Electronic Common Prayer” from the application list. Choose “In-App Products” from the application side menu. Select “Add new product”. Use the product id from the content server.

ADD NEW PRODUCT

What type of product would you like to add? *

Managed product

Unmanaged product

Subscription

Managed items that can be purchased only once per user account on Google Play. Google play permanently stores the transaction information for each item on a per-user basis.

Step 4 The end.

The products submitted to the Apple App store will be available after Apple approve them via their review process. The Google Play store products should be available after creation. If you want to prevent it from being available, change the status from “Active,” to “Deactivate”
